

DMS-SGPAN: suppress subject shift, preserve emotion structure, and adapt reliably

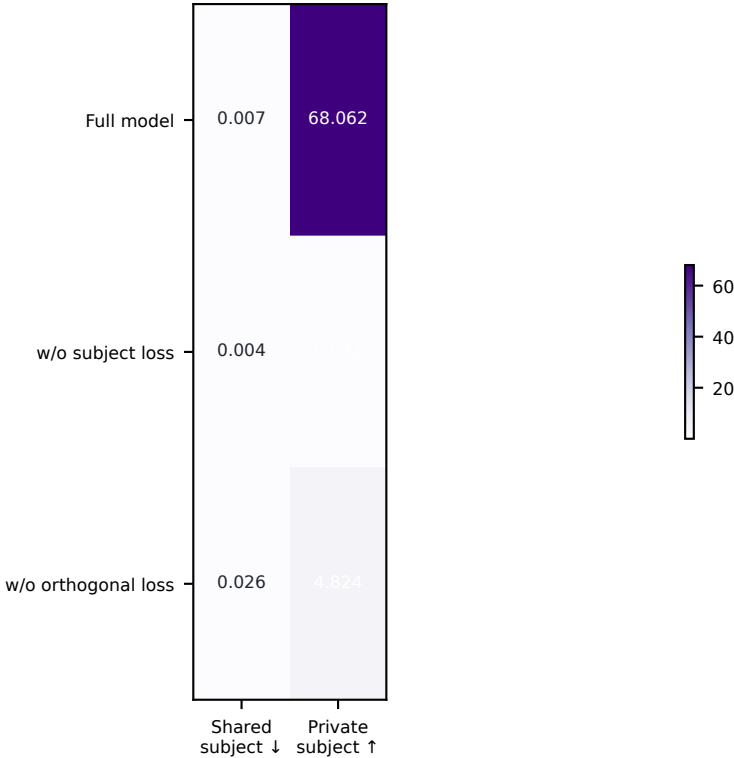

(a) SIN reduces cross-subject shift

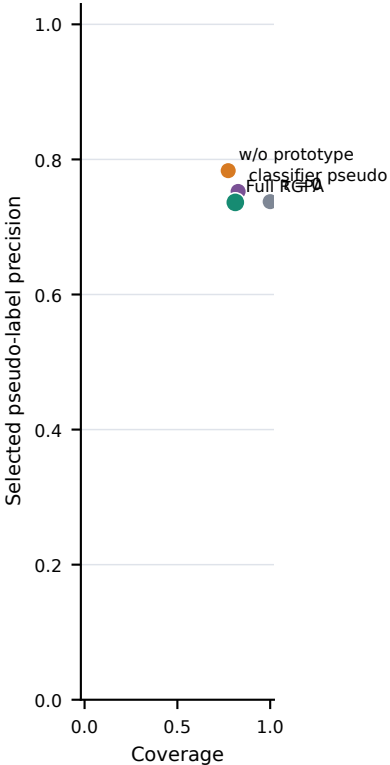

(b) Spectral-graph complementarity

(c) Shared/private factorization

(d) Reliability-guided adaptation

w/o spectral: $\Delta F1$ -0.040 | w/o graph: $\Delta F1$ +0.014 | w/o GCL: $\Delta F1$ -0.026

Visualization labels are used only for offline diagnostics; error bars elsewhere are across subjects, and $\Delta F1$ denotes the held-out test difference from the full model.

w/o prototype: $\Delta F1$ -0.024 | classifier pseudo: $\Delta F1$ +0.007 | $\tau = 0$: $\Delta F1$ -0.043
